COMPLETE PRICE LIST FOR FALL 1931

BOUNTIFUL RIDGE NURSERIES

PRINCESS ANNE, MARYLAND

These Prices Supercede all Previous Prices on Stock Which We List To Our Customers ★

U. S. Department of Agriculture

FOR DESCRIPTION OF STOCK LISTED ASK OR SEND FOR OUR LATEST CATALOGUE

10% Discount for Cash With Order on All Orders Received Before January 1st, 1932. All Orders of \$50.00 or More Shipped Prepaid to You.

YOU are again nearing another season for planting Nursery Stock and The BOUNTIFUL RIDGE NURSERIES following their principle of offering to their patrons the best values possible for their dollar are pleased to make the drastic REDUCTIONS IN PRICE on nearly their entire list of stock and to give to you the LARGE DISCOUNTS and FREE DELIVERY plan as noted above. It is only because we are practicing rigid economy in every department of our Nursery that we are able to do this and this reduced cost of production WE GLADLY PASS ON TO OUR PATRONS IN THE WAY OF LOWERED PRICES ON OUR PRODUCTS. The QUALITY OF OUR STOCK is of the SAME HIGH STANDARD as other years and in fact it is better.

We would like to again call your attention to a few facts with reference to PLANTING STOCK IN THE FALL. We especially recommend that fruit trees be planted in the fall where it is possible to do so and your geographical location will permit it. At all times be sure and get well matured stock for if you don't winter injury is sure to be the result. Briefly some of the advantages of Fall planting are: Usually the Nurseryman has a more complete variety list. This is especially true of Fruit trees. The Nurseryman is not rushed as in the spring and is able to give your order better attention. YOU usually have more time to make the planting properly for in the spring there is so many things to do that the planting of Nursery stock is neglected till often times it is too late to obtain best results. The tree is set and the

roots are healing where they have been cut and growth starts with the first movement of sap in the spring. Tests have proven that from six to eighteen inches more growth is made where Fall and very early spring planting is followed. In all cases where fall plantings are made a small mound of earth about 12 inches high should be drawn about the tree to protect it during the winter and this should be removed in early spring. PLANT THIS FALL AND USE BOUNTIFUL RIDGE NURSERY PRODUCTS IF YOU DESIRE REAL RESULTS.

In these days of advancement and the very close competition from every source, it makes the captain of every branch of industry be alert, to sense the future of every new device so as to keep in the running and if possible keep a little ahead of his competitor; So it must be with the SUCCESSFUL ORCHARDIST AND HOME OWNER and we urge that you consider every merit of the New and IMPROVED SPECIALTIES WE OFFER YOU IN THE FRUIT DEPARTMENT. Compare the merits of the RICHARED DELICIOUS, BLAXTAYMAN, GALLIA BEAUTY (red Rome), MONMOUTH BEAUTY, CORTLAND, LOBO, MILTON, MCCOUAN Apples and the GOLDEN JUBILEE peach, with your older standard varieties, then make your decision and plant that which you feel will give you the greatest returns. EVERY MAN BUILDS HIS OWN FUTURE; CHOOSE WISELY, AIM FOR THE HIGHEST STANDARD.

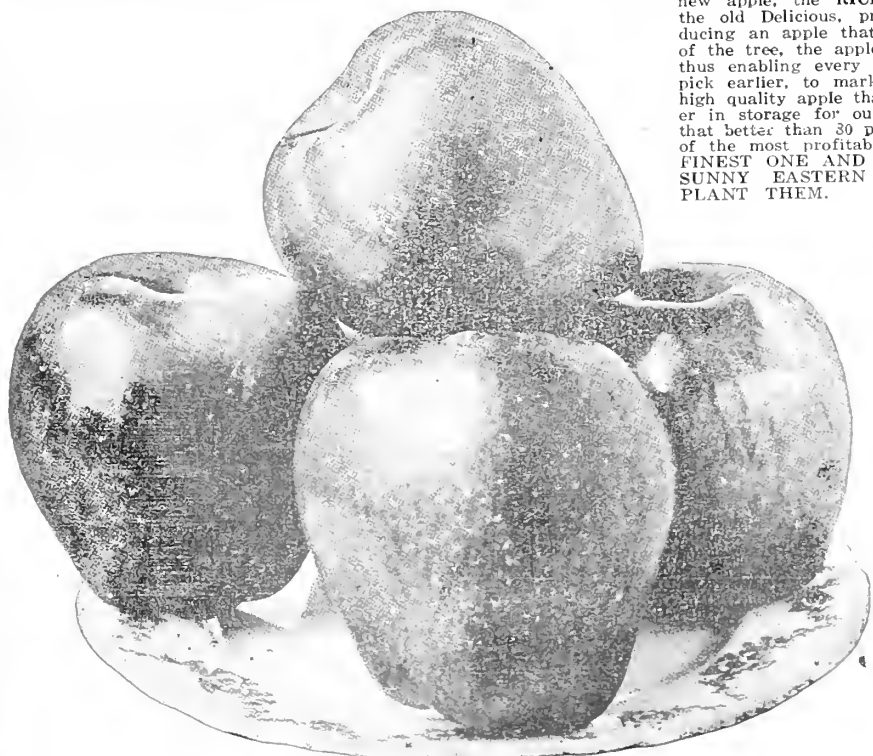

RICHARED
TRADEMARK REG. U. S. PAT. OFF.
The DELICIOUS Supreme

A Blazing Example of One of Natures Contributions to Progress

A Blood Red Mutation of the Famous Delicious That Promises to Revolutionize the Growing of Delicious Apples

You need no longer marvel in doubt. It is here. That Real Delicious Apple that colors a full bright red, without a stripe on every part of the tree weeks before time to pick the fruit. The apple that every man who grows Delicious apples has dreamed of and hoped for. The significance of this Phenomenal freak of nature is hard to realize. It will mean millions of dollars to the fruit growers of this great country. No orchardists can overlook these facts about this

new apple, the RICHARED DELICIOUS. A tree of the same hardy characteristics as the old Delicious, producing an apple with that same appetizing, delicious flavor, producing an apple that colors a full bright red without a trace of stripe on every part of the tree, the apple attaining this color weeks before we usually pick the old Delicious, thus enabling every one who grows it to eliminate the usual loss from drop apples, to pick earlier, to market earlier if he desires to do so, to seek a foreign market with a high quality apple that has superior carrying qualities when picked early and to keep longer in storage for our late markets if desired. These advantages combined with the fact that better than 30 per cent of the apples will grade extra fancy grade should make it one of the most profitable apples for the fruit grower. WE HAVE THOUSANDS OF THE FINEST ONE AND TWO YEAR TREES OF THIS GREAT APPLE GROWN ON THE SUNNY EASTERN SHORE THAT AWAIT YOUR CALL. DO NOT HESITATE. PLANT THEM.

AN ECHO FROM THE GREAT DELICIOUS APPLE SECTION OF THE NORTHWEST

R. EDWARD TRIMBLE
Consulting Horticulturist

Wenatchee, Washington.
I have seen and observed your new strain of Delicious, the "RICHARED," both on the original parent tree and also the apples on the young trees, and in my opinion you have the most beautiful apple in the world. It is certainly marvelous to see these—full blood red color in August, while Delicious on adjoining trees are still green. This added color with advantages of earlier picking, earlier marketing, firmer apples, more extra fancies, no loss from "Wind-falls," and better keeping qualities, convinces me that in the "Richared" Delicious you have an apple worth millions of dollars to the apple industry of the world.

I have no hesitancy in stating that in my opinion the "Richared" Delicious will entirely replace plantings of common Delicious and that it is a better apple from every standpoint.

R. EDWARD TRIMBLE,
Consulting Horticulturist.

APPLE TREES

We have made the growing of apple trees a speciality, trying to produce a superior tree, growing them with well developed root systems, budding them from bearing orchards known to be true to name and this year have some of the finest one and two year trees to offer that we have ever grown. They are here, tens of thousands of them for your inspection. The season has been very favorable this year and they have made an unusual growth. In our variety list below note that we list the Gallia Beauty RED Rome, and the never improved varieties of the McIntosh Family, Cortland, Early McIntosh, LOBO, McCouan and Milton. Special mention should also be made of our splendid stock of about 20,000 York Imperial and 20,000 Gallia Beauty one year buds now ready for the orchardists. We would like for you to see these fine True to Name trees, grown to satisfy the most exacting planter, and especially request that you come to the Nursery and look them over if you are going to plant any this fall or next Spring. Write to us for special quotation on large lots.

How to figure your order on all Fruit Trees: 1 to 6 at each rate; 6 to 50 at 10 rate; 50 to 350 at 100 rate; 350 to 1000 or more at 1000 rate.

STRAWBERRY PLANTS

PREMIER—The leader Among Strawberries

In spite of the extremely dry season during 1930 our plants developed so that we were able to ship our customers nearly TWO MILLION Plants last Spring and with the continued favorable growing conditions this summer we will be able to take care of all orders that may come to us during the coming shipping season. We have used every method possible to know that our plants are true to name and they are being grown on lands that will produce nothing but strong healthy root and top growth. We will guarantee them to be free from injurious diseases. It is not practical to attempt to ship plants during the hot summer months of July and August and the early days of September because of the dangers of heating in transit. We want to accommodate our patrons where possible and let those that wish to plant this fall secure their plants from us so we have decided to offer the following varieties for fall delivery. SHIPMENTS NOT TO BE MADE BEFORE SEPTEMBER 1st. Unusual care will be used in packing these plants so they will arrive in good condition but we cannot be responsible should plants shipped during September and October heat in transit. ORDER YOUR PLANTS NOW TO BE SHIPPED DURING SEPTEMBER AND OCTOBER. TAKE ADVANTAGE OF THE DISCOUNTS OFFERED. THEY WILL PLEASE YOU.

WRITE FOR PRICES ON LARGE QUANTITIES

It is natural that we should have to charge more for plants dug during September and the early part of October, for thousands of small plants are destroyed which would develop to good strong plants if left for spring digging. New prices will be in effect for late fall and spring 1932. Get these new prices before you buy anywhere for spring planting.

8 to 10 feet	2.00	17.50
Chinese Poplar, 6 to 7 feet		

One-Year Old Apple Trees

Good trees like these are the foundation of a successful orchard. These are one year old Buds. Note the height, over 6 feet tall. We have about 125,000 one year apple like these ready for the orchardist this fall, budded from bearing orchards, known to be TRUE TO NAME.

BLAXTAYMAN

(Trade Mark)

What could be more pleasing, more satisfying to an orchardist or any one than to go to a tree that has every resemblance of being our old favorite the Stayman's Winesap and picking **LARGE, SOLID, BRIGHT RED APPLES** instead of the dull striped red apples that you usually find on the average Stayman's Winesap trees. This is exactly what you can do with the **BLAXTAYMAN**. It is a bud mutation of the famous Stayman's Winesap and it has inherited all of the good qualities of this favorite apple of the East, and in addition given to itself a bright, blood red color that covers the apple completely without a stripe no matter where the apples are on the tree. It has a slightly thicker skin than the old Stayman's which gives it better keeping qualities. It is amazing how long the **BLAXTAYMAN** can be kept in common storage and in cold storage. Because of its solid red color it is not subject to storage scald and it is a much more attractive apple for market. The quality is the same as the Stayman's. The tree growth and characteristics are the same as the Stayman's. Just consider what these additional merits

The New Blood Red Staymans Winesap Apple. Another Example of Natures Contribution to This Progressive Age.

can mean to every grower of apples. They can mean the difference between profit and loss; they may mean the difference between your success or failure. The **BLAXTAYMAN** has been thoroughly tested to know that it will reproduce this same type of apple in each generation. The value of it to the fruit growers cannot be estimated and every alert and progressive orchardist should plant this apple if the Stayman's type of fruit is desired. **WE SOLD OUT OF THE TREES OF THE BLAXTAYMAN LAST SPRING LONG BEFORE THE SELLING SEASON WAS OVER. WE NOW HAVE A FINE SUPPLY OF ONE AND TWO YEAR STOCK FOR THIS FALL'S AND NEXT SPRING DELIVERY. ORDER WHAT YOU WILL NEED NOW SO YOU WILL BE SURE OF GETTING THEM. WRITE FOR SPECIAL OFFERS IF YOU WISH SEVERAL HUNDREDS OF THEM. WE HAVE REDUCED THE PRICE ON BOTH THE BLAXTAYMAN AND RICHARED DELICIOUS. PLAN TO PLANT THIS FALL. PRICES FOR BLAXTAYMAN AND RICHARED WILL BE FOUND ON FRONT COVER PAGE OF THIS FOLDER.**

Golden Jubilee Peach

Developed and introduced by the New Jersey Experimental Station—A high quality, Early, Yellow, Freestone Peach beyond every expectation.

Too much credit cannot be given to the officials of the N. J. Experimental station for giving to the fruit growers a peach with the merits of the **GOLDEN JUBILEE**. Too many good things cannot be said about the **GOLDEN JUBILEE** for apparently it stands about a weakness or an equal for its season. We have observed the peach closely since its introduction and find the tree unusually vigorous and it has not failed in a crop since it started fruiting. It seems to be extremely hardy in the bud and resists spring frosts well. We do not feel that any orchardists should make a planting without having the **Golden Jubilee** in the list of varieties regardless of his location.

The **GOLDEN JUBILEE** peach is a second generation seedling of the Elberta crossed with the Greensboro. The tree is very hardy; the foliage more resistant to disease than the average. The blossoms open after Elberta and are very hardy. The peach is a yellow skin and yellow fleshed peach being highly and attractively colored; it is a perfect free stone. Has a self fertile blossom; is a prolific bearer, ripening from 3 to 5 days before Carman or about 3 weeks before Elberta. It will carry well to market and compare favorable with Elberta on any market regardless of season.

We have sold out of the trees of this variety each year long before the spring shipping season was over and while we have our usual supply of them we should advise you to order now if you wish to be sure of getting the grade trees you desire.

One block of our two-year-old apple trees. Note the acreage. Note the fine straight bodies. Note the fibrous roots on the tree Mr. Kemp is holding. Trees such as these are bound to give maximum results. Place your order now for this years needs. They are grown to give satisfaction.
